Go to staff directory home Ms Elise Goodwin serves as deputy executive director (EO) for the National Institute of Diabetes and Digestive and Kidney Disease (NIDDK), National Institutes of Health (NIH). Ms Goodwin, who works with the Executive Director, provides strategic leadership, management, supervision and consultation on critical business and management operations in support of the Institute's administrative infrastructure and functions. Ms. Goodwin's federal career includes 28 years, during which time she made a name for herself for her collaborative style, leadership skills and her technical knowledge. Since joining the NIH in 1992, she has taken on successively demanding tasks, including as administrative officer and deputy chief and chief of the NIDDK's intramuscular administrative management department. Ms. Goodwin led multiple NIH and HHS committees and initiatives that helped strengthen programs and administrative communities and was hand-picked to lead the department's broad ReImagineHHS Maximize Talent Employee Engagement team, with a major focus on improving employee recognition. Ms. Goodwin earned a bachelor's degree in family studies from the University of Maryland and is a graduate of the NIH Senior Leadership Program. Committees & Working Groups NIH Advisory Committee on Human Resources, Member of NIH Title 42 Optimize Committee Working Group, Co-Chairman of the B.A., Family Studies, University of Maryland Modern Standard-Sized Piano has 88 keys, equal to 88 notes and covers a range of seven octaves plus a smaller third. Several pianos are specially made with an expanded bass range, such as the Imperial Bosendorfer, which has 97 keys and covers a range of eight full octaves. The piano range has grown throughout history. Mozart's piano had a range of just five octaves, or 60 keys. By 1810, the piano had reached a series of six octaves, or 72 keys. Several of Beethoven's later songs were written using this extended range. In the late 1800s, the 88-keyboard became the standard. Author: Jon Stefansson For a fun way to make music on the Internet, try visiting a website that paints your computer keyboard on the piano. Using midi piano sounds and Flash animations, this website allows you to play virtual piano using the keyboard. It shouldn't take more than a minute to get a virtual ivory lock. Go to the virtual piano website (see resources) and wait for the piano to load. The keys on your computer's keyboard match your virtual piano notes. Number 1 is the deepest note and M is the highest. Notes move higher from 1 to M from left to right, top to bottom on the computer keyboard. The virtual piano displays the note being played and allows you to switch the virtual to keep the pedal on or off. Go to the virtual keyboard website (see Research). The keys in the middle row of the computer keyboard (A through L) correspond to the piano keys shown on the Play simple melodies by pressing keys on your keyboard and hear piano sound back through your computer speakers. Sharp (black) notes can be played by pressing the keys in the top row of your computer keyboard (W, E, T, Y, U, O, and P). Visit the online piano games page (see resources) and scroll down to the piano image. To play a note, press the computer keys as they are marked on the piano keys. for example, R plays the farthest-left C-note key. Some number keys play black piano keys. This piano is much less advanced than other options, displaying only a limited set of keys. It takes time to learn the piano varies from one person to another. Factors that tend to play a role in difference include time devoted to studying and practicing piano, student age, teacher experience, student passion and their natural abilities. The more time devoted to studying piano, the shorter the time it takes to learn. Another factor to consider is that adults tend to learn faster than young children. Being taught by an experienced, knowledgeable and inspiring teacher will also facilitate learning. In addition, students who cancel regular exercises and those who are passionate about playing the piano take a shorter time to master the craft. Some people have natural abilities that make skills come easier to them, but practice is usually the biggest factor in learning. There are some areas of the home where the piano should never be kept. Be careful when buying a piano that has been kept in the following environments: LiveAbout uses cookies to provide you with a great user experience. By using LiveAbout, you consent to the use of cookies. Thinking about using lockdown time to learn piano? Read on for our ranking of the best piano keyboards you can buy. Having the ability to play the instrument can be a huge game-changer for your mental health, cognitive abilities and general happiness – no matter how old you are. And with many of us facing more time indoors than usual right now, there is no time like the present to start on the road to learning the keyboard or pick it up again after a long break. If you're a brand new piano, it's a great first instrument. Piano is a fairly simple instrument to learn, with a pretty shallow learning curve – although of course, like anything, to be really great you need that in hours eventually! There is also a ton of great educational resources out there for people of all ages and abilities. Cyber Monday sales: our fave Aussie deals on tech & more Compared to string instruments where you have contort your hands into all sorts of unnatural feeling positions (at first) to create the sound, the piano keyboard does a lot of the 'heavy lifting' work for you. (Although if you decide that you fancy it, we have tutorials on the best acoustic guitar for beginners, and the best electric guitar for beginners to guide you on your journey.) In this guide, we run keyboard pianos available to buy now. If you are in a hurry, you can jump directly into the shopping guide. If not, we'll start with some advice on what to look for before making a purchase. Best piano keyboard: What to look for If you're just getting started, you probably won't want to shell out the £3k+ needed to buy a decent acoustic piano, even if it's your eventual end-choice of play. The ideal tool to learn is a weighted digital piano with full-size keys, unlike a keyboard with light or smaller keys. Unweighted keyboards are good for learning notes and theories, often have a lot of sounds and features, and are undoubtedly easier to push down, don't give your fingers the exercises they need to build technique, power and accuracy. It is essential that finger strength and agility are taken seriously (even for young beginners). The more exercise you put your fingers in, the fitter will become and the more capable they will be for every musical role you give them in the future. Besides, it's important to find out what you really need feature-wise to make learning fun and engaging. The first consideration is price/budget. Expect to pay £200-£400 for a decent unwavering portable keyboard and more than £500 for a weighted digital piano. Action-wise, keep in mind some like the harder feel of the keyboard, while others prefer lighter-feeling keys. Again, it is ideal if you can get into the store (after this current lockdown has finished) which has several leading brands on display so you can make an informed decision. Fortunately, leading brands in keyboards/digital home pianos (like Korg, Yamaha, Casio, Roland and Kawai) generally have nicely balanced, weighted events that feel very piano-like, so if you have to buy an invisible we recommend going to a long-established brand from a respected retailer with good warranties and aftercare, and paying attention to customer reviews. Many of these larger manufacturers also have learning/support applications that work in sync with their digital keyboards/pianos via Bluetooth or USB. Always try to get a height adjustable chair that can accommodate two people who are part of the piano keyboard. One of the big problems among keyboard players is poor posture, often caused by sitting at the wrong distance or height from the device. This can lead to all manner of problems with the back and neck, and eventually to poor technique. It's worth making sure, too, that the keyboard piano has an adjustable music stand to put sheet music or iPad on - not all options include it. Best Piano Keyboard: Audio and audio features be sure to overlook the speaker system on board. Is it loud enough? Sounds warm and fresh or horrible and tinny? You have to decide these points for yourself, but you'll know when your ears are smiling when you test in person or audition audio clips. In addition, you need to make sure that any keyboard/digital piano fits in its surroundings – most manufacturers offer a variety of finishes, from shiny black and white to wood. When it comes to sounds, a wide range of bread and butter sounds is important (organ, strings, guitars, woodwinds, brass, clav and so on), but the most important thing is great piano sound. Eq and reverb are also great for customizing sounds and the ability to layer two sounds is handy too. In addition, a couple of audio outputs are required if you want to record or connect to a mixing table/PA system, and having two headphone sockets means that you will be able to play along with another person at any time of the day or night. Other must-haves include metronome (which can provide audio and/or visual click screen for exercise timing and scales) – solid rhythmic support will help no-end with timing in the long run. Alternatively, if the digital keyboard/piano has built-in beats and auto-accompaniment then it can serve the same function, and in a more fun way than just listening to boring clicks! Beats and auto parade will improve your timing, get listening and improvisation (and on the way to interference with real people) and allow you to work on your harmonious language/ideas too. Finally, the ability to record your performances to internal memory like audio, to an external memory stick, or on board a sequencer is very useful. These features all allow you to record yourself and then listen back and hear where things are going wrong or improve – this will only help and speed up the learning process. And as a bonus you can show off your amazing performances to your friends and family too! The best piano keyboard right now image 1 of 3 image 2 of 3 image 3 of 3 A portable digital piano that looks classy with great functionality offers tons of useful features at a reasonable price, Roland FP-30 is our pick for the best piano keyboard right now. This high quality machine offers many features you should be careful about. First, roland is a full size 88 key 'Ivory Touch' keyboard that adds grain to the keyboard surface for a more piano-like feel. Along with 2 x 11 watt speakers, 35 decent 'bread and butter sounds' from roland's well-respected supernatural sound library (found in its more expensive for synthesizers and keyboards), Bluetooth connectivity to connect to apps, dVR ideas, keyboard split and layers, 8 rhythms, playing audio files from USB stick to jam along with, dual headphone jacks and microphone input, there's a lot of work to do. Roland digital pianos are great brands to look for in general, especially since they often have a nice piano-like touch too. (Image credit: Korg) This piano keyboard looks the part, sounds part and comes with a stand No list of the best piano keyboards would be complete without the Korg product. This brand produces high quality machines full of great sounds, and the Korg SP-280 is no different. It definitely looks the part and is a little more dynamic and exciting looking compared some other home made digital piano designs. It's also quite portable too. The keyboard has 88 notes with hammer action and loud 22 watt speakers face to face, which gives you a nice immersive sound. There are 30 layer-capable sounds on board too (including pianos, electric pianos, clav strings, organs and more (as you'd expect) from the Well-Respected Korg Sound Library and there's a hardwired line of input for playing other devices through speakers. Oh, and there's a metronome! (Image credit: Kawai) At a reasonable price, the great feel of the keyboard and solid features kawai is known for its excellent feeling hammer action keyboard pianos and ES 110 maintains this tradition. The 88 tiered hammer action fully-weighted keys allow you to develop your piano techniques and there are many built-in sounds too, including 8 high quality piano sounds plus 11 additional sounds that can be split and layered. You will find concert and studio grands, electric pianos and bodies and strings, bass and vibrations. For practicing chops, there are other key educational features on board, including a metronome, as well as 100 beats to spice up and keep practice sessions fun. Not only that, there is a song recorder on board with a capacity of 15,000 note and Bluetooth MIDI connectivity for wireless application connectivity. There's also a built-in lesson feature that lets you practice along with built-in songs, along with a pair of high-quality speakers and two headphone jacks for duets. (Image credit: Casio) One of the thinnest fully-weighted digital pianos around Casio may be the name that connects more with the watch, but this brand also makes great keyboards and digital pianos too. Its esteemed actions are generally excellent and nicely balanced and the Privia series is also well liked. The Casio Privia PX-S1000 has plenty for beginners and more experienced players to work with, offering some pretty high quality sounds on board and an easy-to-use, simplified interface. It's quite light at 11.2kg, so you could take it to concerts pretty easily. It also has a scaled hammer action keyboard (acoustic pianos feel heavier on the low end and lighter at the top, which is imitated here), 18 sounds on board, split and layer functions, two front-mounted headphone sockets (for duets etc.), Bluetooth, Metronome, 60 built in practice exercises, a chorus of thicken sounds, brilliance control and an optional stand too. Also available in white. Luckily it won't break the bank either! (Image credit: Roland) Cheap, easy solution for learning, gigging and more No everyone wants a harder touch of weighted keys and Go: Piano range offers a fair compromise in the feeling of falling somewhere between a lighter feeling of unwavering keys and fully weighted piano keys. There's more resistance to playing compared to unsay keys, but Standard pianos key spacing that helps with technique. 88 notes also allow you to explore the entire piano range of notes. If you don't need a keyboard that long, there's also a 61-note option. Onboard is a metronome, four main sounds (piano, electric piano, organ and strings,) 10 internal songs, powerful speakers, Bluetooth (which allows you to stream audio through onboard speakers for exercise) and Bluetooth MIDI for wireless connection to MIDI enabled applications such as the Included Piano Partner 2 tuition app. Also increase the portable nature of GO: Piano, there's a battery too. (Image credit: Korg) A 'stage piano' with a seriously large speaker system When technically classified as a stage piano, the Korg SV2S is a great home piano thanks to its built-in K-Array high quality speaker system that can really kick out some serious volume! The SV-2-S has high quality weighted RH-3 events (in 73 and 88-note versions) and really professional sound banks that are taken from korg's flagship Kronos keyboard product. You can split and layer and there's an application editor so you can create your own sounds too. The interface is very direct and intuitive (no menu) and there are many great pianos, electric pianos, strings, bodies and classical effects. Great digital piano for being at home, but it can also be taken to concerts as a pre-instrument. It also has an optional stand. (Image credit: Yamaha) Super lightweight, cheap keyboard piano, with fixed features for beginners Azac Roland Go: Piano, Yamaha's NP32 Piaggero works for those who do not like or who might struggle with, heavier weight of fully weighted keys, but still want to develop a good technique on a standard keyboard with full size keys / standard finger spacing. The 76 keys here are not weighted, but they have enough resistance for exercise and accurate play. In addition, there are plenty of features on board for beginners too. This keyboard is especially popular with buskers, due to its very light shape factor. There are 10 well sounding basic sounds on board, split and layers, a metronome for timing practice, it's battery power-capable, has a built-in recorder for recording and playing ideas and has a very simple, intuitive operation without menu-diving. Built-in speakers facing the Player are also useful. Great learning keyboard piano on the way to fully-weighted keys. (Image credit: Yamaha) Great learning keyboard at a bargain price For those younger students out there and for those who don't want a weighted keyboard, then the Yamaha YPT-260 has a lot to offer. It has 61 light synth-action keys (so not weighted), but along with that, it has to learn a feature that includes several songs (with music to download) to improve your skills. You can practice your hands separately muting parts in songs and the keyboard will wait until you play the right notes and timing too, plus you can record the results to hear you in addition, you will find speakers on board, it's very light and portable, it has an affiliate mode that divides the keyboard for two players and there's a lot of supporting styles with beats, bass lines and other parts to jam along with. You can also connect other external sources (such as an MP3 player) and listen to music passing through internal speakers. (Image credit: Casio) Let the keys light their way into the musical sky! Here's another keyboard piano focused on those starts. Made by Casio, LK136 has an easy-to-play 61-note keyboard with a trick up your sleeve: the lights up keys and the chords/notes you play are displayed on the display to help you learn quickly. This may sound tricky, but it certainly beats the old-favorite trick of adding stickers to keys so you can remember the notes! The deck includes speakers, a music booth, a decent display size, battery, 120 sounds, 70 rhythms with fillers and 50 accompanying tracks that you can rearrange and remix yourself. There are also 100 practice pieces on board and the lesson feature will show you exactly which notes to play and when. Elegant! You can also get free access to the Casio Music Academy, which has many online resources for learning. (Image credit: Korg) You're never too young to start learning – this is the best keyboard for kids Every boy should have a playful piano to play with because it encourages them to start playing from an early age without any pressure. However, not all playing or children's pianos are created equal - many have sounds that are not on the right pitch and have keys that feel terrible. Basically, if you're going to have a playful piano in the house for your kids then at least one that works like a mini piano and sounds like one too. Hey Presto - tinyPIANO from Korg! It has 25 high quality sounds on board, it's battery-capable has a built-in speaker and is available in black, white, red and pink to suit. While the keyboard is short on two octaves and the keys are small, the keys are the same as found on the huge Korg MicroKorg XL sale and they feel surprisingly decent. Decent.
